

Darlington Memorial Hospital Theatre Upgrades

Healthcare

Client: Durham & Darlington NHS Hospital Foundation Trust

Value: £350,000

Completion: January 2013

Integrate

Collaborate

Project Overview

Darlington Memorial Hospital provides a full range of outpatient clinics and diagnostics, inpatient surgery, children's services and consultant led maternity services to a population of approximately 130,000.

Opus Building Services were commissioned by Darlington Memorial Hospital to carry out upgrade works on Theatre 6. This is phase 1 of a wider project to upgrade all seven theatres.

The works included the installation of mechanical and electrical services from data system installation and an AHU ventilation system to LED lighting systems and control, as part of the full refurbishment of the theatre.

Works were successfully completed directly on behalf of the Trust within a live hospital and working theatres environment on time and within budget. OPUS were meticulous in ensuring works were completed on time, mitigating disruptions to care staff and patients and also maintaining high levels of hygiene at all times.

Services included:

- General Power and Distribution
- LED Lighting Systems and Control
- Fire Alarm System
- UPS and IPS Systems
- Nurse Call System
- Data System Installation
- AHU Ventilation System
- Medical Gas Installation including Theatre Pendants and ZSU
- AGSS Installation
