Project Overview

As part of the Newcastle upon Tyne Hospitals NHS Foundation Trust, the Freeman Hospital delivers a wide range of advanced, patient-focused healthcare to patients from Newcastle, the North East and beyond.

Opus Building Services supplied and installed mechanical and electrical services directly to the Newcastle NHS Hospital Trust, providing complete upgrade of the outpatients department and clinics at the Freeman Hospital. Opus were responsible for the entire contract and worked closely with the trust to provide a programme of works that ensured minimal disruption to the running of the departments, medical teams and patients whilst the upgrades were being completed.

All works were undertaken during normal working hours and Opus provided screened-off areas to maintain privacy and high levels of cleanliness whilst works were being completed.

Services included:

- General Power and Lighting
- Fire Alarm System
- Access Control
- UPS and IPS Systems
- Nurse Call System
- CCTV System
- Data System Installation
- Patient Entertainment System
- AHU Ventilation System
- Medical Gas Installation
- AGSS Installation
- Domestic Services
- Drainage Systems
- Radiant Panel Heating System
